Phase One of the McIntosh County Historic Resources Survey has been financed in part with federal funds from the National Park Service, U.S. Department of the Interior, through the Historic Preservation Division of the Georgia Department of Natural Resources. However, the contents and opinions do not necessarily reflect the views or policies of the Department of the Interior or the Georgia Department of Natural Resources, nor does the mention of trade names, commercial products or consultants constitute endorsement or recommendation by these agencies. This program received Federal financial assistance for identification and protection of historic properties. Under Title VI of the Civil Rights Act of 1964, Section 504 of the Rehabilitation Act of 1973, and the Age Discrimination Act of 1975, as amended, the U. S. Department of the Interior prohibits discrimination on the basis of race, color, national origin, age, gender or disability in its federally-assisted programs. If you believe you have been discriminated against in any program, activity, or facility as described above, or if you desire further information, please write to: Office for Equal Opportunity, National Park Service, 1849 C Street, N.W., Washington, D.C. 20240.

Acknowledgements

We would be remiss not to thank the many individuals and groups that assisted us in the completion of Phase Two of the McIntosh County Historic Resources Survey.

Gratitude is extended to the McIntosh County Historic Preservation Commission, Raluca Filimon and the Historic Preservation Division (HPD) of the Department of Natural Resources, and County Manager Patrick Zoucks who provided generous guidance and effective management throughout the project, guiding project methodology and implementation.

As in Phase One, the insight and connections made with the assistance of Eunice Moore proved invaluable. Gratitude is extended to Ms. Moore, who's passion for McIntosh County history and involvement in the community is contagious. Likewise, the guidance, encouragement, and insight shared by Buddy Sullivan again elevated the credibility and success of this survey phase. A special thank you to Mr. Sullivan.

Throughout the survey, our efforts were enhanced by the numerous property owners and individuals we encountered along the way, many of whom were gracious enough to share their resources and stories with us. A special thank you to Robert Horan and Valarie Ikhwan at Fort King George, both employees of the Department of Natural Resources, who provided background information and site access to our team.

A very special thank you to Frank Williams, III, who graciously provided a tour of a handful of resources, to include parts of Creighton Island. Mr. William's stewardship and conservation of historic and natural resources is one of the county's greatest assets.

A thank you is extended to Debbie Morris, Mike Edwards, Fred and Sarita Marland, Maddie Gladstone and her son, County Commissioner Charles Jordan, and Harold Webster for taking the time to share their properties and stories with us. Your hospitality and generosity of time is greatly appreciated.

The time, effort, and information shared by all of the individuals and groups mentioned above allowed for a more comprehensive and complete survey to be performed, each phase has proven to be a team effort that is bettered by the work of many.

EXECUTIVE SUMMARY

Phase Two of the McIntosh County Historic Resources Survey was performed between October of 2016 to March of 2017 as a continuation of an effort to comprehensively survey historic resources throughout the county. An outcropping of the Phase One survey boundary, the Phase Two survey area includes Butler Island to the south, Black Island and the coast along the county's east flank, Ridgeville (also known as The Ridge), Carnigan, Meridian, Valona, portions of Crescent, part of Highway 17, and Ardick, all of which are areas east of Interstate 95; and areas south of Highway 99 (Figure 1). In all, the survey gathered information on 496 resources to include buildings, structures, sites, and objects constructed before 1975 in McIntosh County.

Figure 1: Areas surveyed in Phase One and Two in McIntosh County in red (Google Maps).¹

Preliminary fieldwork showed a prevalence of dispersed communities, suburban development, waterfront and marshfront properties, roadside commercial development, mobile home enclaves, a handful of

¹ McIntosh County, GA. Map. Google Maps. Google. Web.

industrial structures, and rural farmland. Based on field estimates, it was projected that a total of 400 resources would be surveyed. Mimicking the parameters from Phase One, mobile homes were not surveyed as part of Phase Two in an effort to cover a greater survey area within the time allotted.

Largely characterized by rural land and scattered development, much of McIntosh County is made up of dispersed historic communities connected by state highways and their associated ancillary streets, many of which have been added over the last 50 years. As such, the county's oldest historic resources are concentrated within these enclaves, to include The Ridge, Meridian, Crescent, Valona, and Bolden. Development from the 1960s and beyond can largely be found along the state routes that connect these communities.

The breakdown of resources recorded in Phase Two by type is as follows: 470 buildings, 1 structure, 16 sites, and 9 objects. Building off of data gathered in the 1989 Historic Resources Survey of McIntosh County, 208 previously surveyed resources were updated in the Georgia Natural, Archaeological, and Historic Resources Geographic Information System (GNAHRGIS). Only the GNAHRGIS fields that represented the features of these resources that were altered since 1989 were updated. Additionally, 288 resources were assigned new GNAHRGIS unique identification numbers. Resources less than 40-years old were not entered into GNAHRGIS, with the exception of two historical markers that were installed in recent years as a way of comprehensively surveying markers county-wide. Additionally, the **Blockhouse at Fort King George (GNAHRGIS #46589)**, a 1988 reconstruction of a ca. 1721 historic blockhouse, was surveyed.

Included in the above totals are resources that were surveyed as part of the 1989 McIntosh County Historic Resources Survey that have since been demolished. The total number of resources that no longer remain on the landscape, but were surveyed in 1989, is 103.

There were a handful of parcels that were unable to be surveyed. These lots are located along the county's east flank, as many driveways extend east off of Highway 99 and are gated or explicitly request no trespassing. Those with known historic resources were contacted by mail and telephone, and surveyed whenever possible. Unresponsive property owners meant that some parcels that were surveyed in 1989 could not be surveyed in this phase, such as **Indian Cemetery, Townsend Mound (GNAHRGIS #46597)**.

One National Register listed historic district is located within the survey area, The Ridge, listed in 1985. Additionally, there are three individually listed National Register historic sites within the boundary, **Fort King George (GNAHRGIS #46589)**, listed in 1971; the **D'Antignac House (GNAHRGIS #45661)**, listed in 1977 and demolished in 2007; and **Ashantilly (GNAHRGIS #46488)**, which was listed in 2015 and surveyed as part of Phase One as an outlier to the Phase One boundary. Both Fort King George and Ashantilly have high integrity and are in good condition. Three of the 103 resources lost since 1989 were contributing buildings to The Ridge National Register Historic District.

For a detailed map of the current survey area with boundaries of the National Register historic districts within the Phase Two survey area delineated, see Appendix 2.

SECTION 1: PROJECT DESCRIPTION

Phase Two of the McIntosh County Historic Resources Survey was performed as part of a countywide effort initiated by the McIntosh County Board of Commissioners and led by the McIntosh County Historic Preservation Commission to identify and survey an estimated 400 buildings, structures, sites, and objects constructed before 1975 within a boundary set outside Darien and the Phase One survey area. In an effort to survey 400 resources, the fieldwork boundary expanded to include not only areas 1B and 2A but also area 2B, with the exception of Sapelo Island, Union Island, Doboy Island, and areas north of Highway 99 (Figure 2). The survey was funded in part through a Certified Local Government (CLG) Survey and Planning Grant from the Historic Preservation Division of the Georgia Department of Natural Resources and matched in part by the McIntosh County Board of Commissioners. All fieldwork and data entry was performed by Secretary of the Interior qualified Architectural Historian Rebecca Fenwick, Historic Preservation Specialist, who served as Principal Investigator, and Erin Ward, Historic Preservation Intern, both of Lominack Kolman Smith Architects of Savannah, GA.

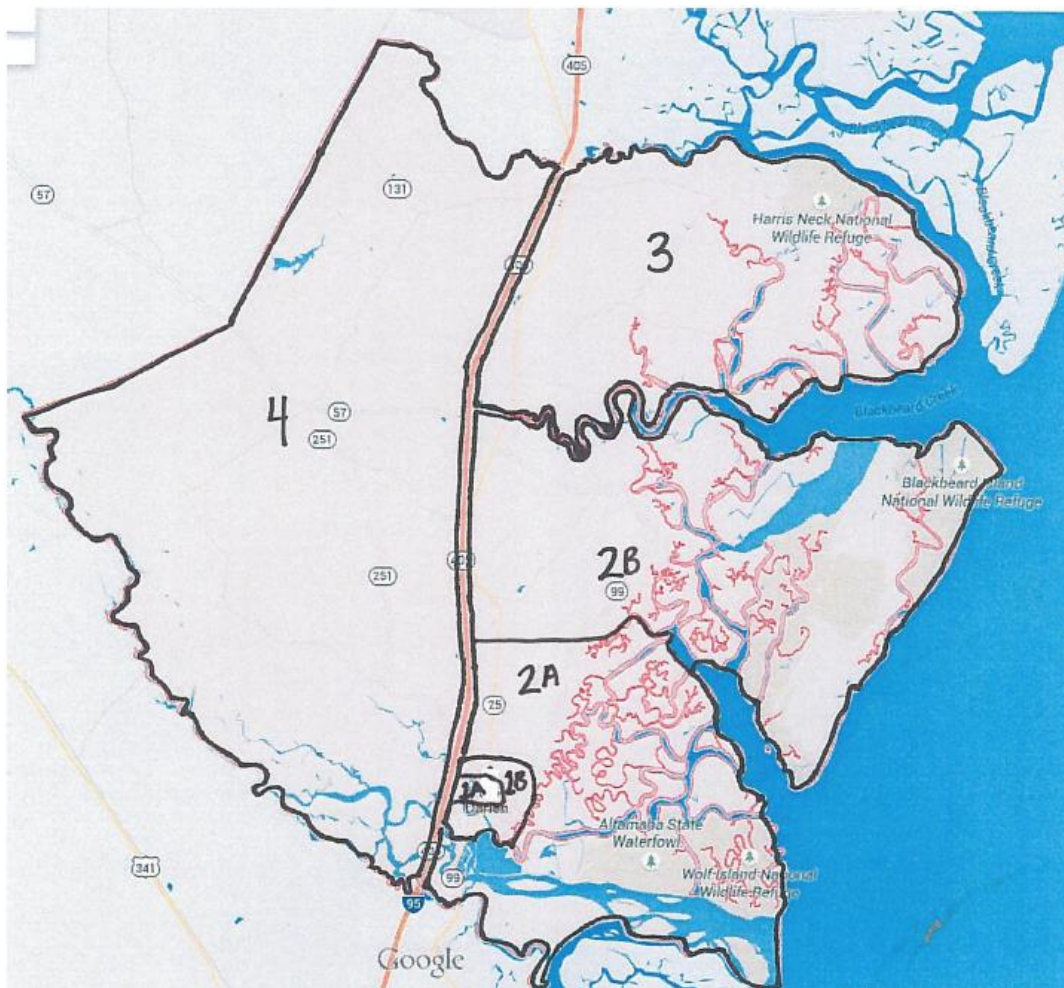

Figure 2: McIntosh County Phased Survey Zones, Phase Two included all of 1B and 2A and portions of 2B.²

² “Exhibit B: Four Geographic Areas Identified by HPD for County-Wide Survey,” McIntosh County Historic Resources Survey Request for Qualifications, 2016.

A total of 496 resources within the survey area outlined above were documented and entered into GNAHRGIS. It is believed that the Phase Two area has been comprehensively surveyed to include buildings, sites, objects, landscape features, and structures over 40-years of age.

The intensive-level field survey was performed by Lominack Kolman Smith from October of 2016 to March of 2017. Rebecca Fenwick and Erin Ward recorded all surveyed resources through high-quality digital photography and field recorded data on Georgia Historic Resources Survey forms for use with GNAHRGIS. Each GNAHRGIS data entry includes a minimum of two photographs, unless this proved impossible due to limited visibility. Appendix 1 lists each resource's GNAHRGIS number, resource type, resource name, address, parcel number, current use, date of construction, architectural style, and building type. A large-scale map of the survey area (1' = 300') has been included with parcels and addresses of surveyed resources identified (Appendix 2).

The results of this project are the completion of data entry of the 496 resources surveyed in GNAHRGIS, a survey map at 1' = 300' scale, and this survey report. A hard copy of the map and survey report, as well as a digital copy on CD, are on file with the HPD.

SECTION 2: SUMMARY OF PREVIOUS PRESERVATION PROJECTS

Largely, previous efforts to preserve resources within the Phase Two boundary have been associated with private property owners and specific areas and sites.

Early informal preservation efforts in the Phase Two survey area include the continued use and interest in the historic houses at The Ridge. Many of these homes have been passed down through familial ties to descendants of the original homeowners. As a result, many have remained in constant use and care. Preservation of resources at The Ridge is compounded by their proximity and picturesque placement along the edges of Highway 99.

Other early preservation efforts include the listing of **Fort King George (GNHARGIS #46589)** to the National Register of Historic Places in 1971 and the establishment of the Lower Altamaha Historical Society (LAHS) in 1979 and subsequent restoration of the fort in 1988, in part funded by LAHS.

One of the champions of the establishment of LAHS was William G. “Bill” Haynes, whose father William Haynes, Sr., purchased the abandoned ca. 1820 home of Thomas Spalding known as **Ashantilly (GNAHRGIS #46488)** in 1918, restoring the house after it suffered a devastating fire in 1937. In 1994, Ashantilly was placed in a conservation easement to ensure its continued preservation. Today, it is home to The Ashantilly Center. Founded in 1993, the Center serves as a conservation organization and non-profit focused on education, science, and advocacy for the natural and built environment on the Georgia coast. The Center routinely hosts historical programs and speakers related to McIntosh County history in addition to operating a manual printing press brought to the site by Mr. Haynes.

In 1975, The Ridge was listed as a National Register historic district. It is one of Georgia’s few intact examples of a nineteenth century residential coastal community, developed to provide a refuge from the “intolerable heat of summer” in the nearby city.³ Recognized for its setting, architecture, and association with important individuals, this is one of two historic districts in McIntosh County outside of Darien. It should be noted, however, that since its listing, four contributing resources to the district have been lost, including the **Reames General Store (GNAHRGIS #46508)** and the **William Downey House (GNAHRGIS #46505)**.

Unfortunately, these are not the only significant demolitions that have occurred in the county. In 2007, the **D’Antignac House (GNARHGIS #46561)**, individually listed on the National Register, was demolished. Built ca. 1790, the Federal style house was a part of many stories and legends including a famed story of a plot to capture Napoleon on his first visit to America. While not purchased by the D’Antignac family until 1910, the house’s association with the family served as its most celebrated historical use as the D’Antignacs operated a commissary out of the house for many years. Eventually, the house was sold to a developer, who planned to construct condominiums on the site. Many residents protested his application for demolition. Razed during the middle of the night, the site still remains vacant. One of the oldest houses in Georgia, its demolition was recognized as a significant loss to the state.⁴ With publicity from the Georgia Trust for Historic Preservation, the loss is remembered by many.

In 1990, the first edition of *Early Days on the Georgia Tidewater* was published by local historian Buddy Sullivan. This was the first text to comprehensively cover the history of the entire county and remains the definitive historical text for the county’s history, now in its seventh edition, released in 2016.

³ Carolyn Brook, The Ridge Historic District, National Register of Historic Places Nomination Form.

⁴ “Gone but Not Forgotten,” The Rambler, Vol 34 No. 5, Winter 2008, pg. 4-5.

In 2000 LAHS published *Cemeteries in McIntosh County Georgia*, the culmination of ten years of work cataloging and documenting all known cemeteries in McIntosh County. This remains the only publication and definitive text on cemeteries in the county, informing the survey of cemeteries in Phase One and Two.

In addition to The Ridge, many rural areas of the county have remained within the same family and passed down through several generations. While this has not always meant the retention of historic resources, many houses, cemeteries, and other resources that have familial ties have been preserved because of these connections. McIntosh County has many residents with “deep roots,” whose ancestors have lived in the area for multiple generations. This trend is fading, however, as more recent generations have become more likely to move out of the county.

In recent years, the Fort King George State Historic Site has been involved in performing ground penetrating radar scans to determine locations of additional soldier burials, uncovering nails, ceramics, and other material culture from the eighteenth-century sawmill era in the process. As part of this, the Georgia Department of Natural Resources has purchased a neighboring parcel to the historic site, to the west, where additional soldier burials and the fort’s original location are believed to be. A 1973 brick veneer ranch house that sits on this lot will be demolished as part of the project. This area will eventually serve as additional interpretation grounds. Other projects include the on-going interior renovation of the 1991 visitor center, which will result in greater handicap accessibility, a redesign of the front entry and gift shop, as well as fundraising for a kiln which will allow for brewing and baking reenactments.

Relatively little construction or renovation work was observed in the Phase Two area during the survey. No other active preservation efforts associated with the Phase Two area are known at this time.

SECTION 3: DEVELOPMENTAL HISTORY

The developmental history of the portions of the county covered in Phase Two dates to the area's use by Native Americans, as evidenced in the survey of the **Fort King George Indian Village (GNAHRGIS #46590)**. The earliest known inhabitants of what is now the Fort King George State Historic Site were Guale Indians, dating to as early as 3000 to 1600 BC. The Guale were Creek Indians who were referred to by the Spanish who encountered them as "Guale," as this was the section of the coast occupied by the Indians when the Europeans arrived. Other early Native American activity was documented by Philadelphia archaeologist Clarence B. Moore, who, on his journey in 1896, chronicled his findings of the **Indian Cemetery at Townsend Mound (GNAHRGIS #46597)**, including observations related to soil composition, skeletal remains, earthenware, and shell and stone deposits.⁵

In the sixteenth and seventeenth centuries, the area known today as Fort King George was the site of the early Spanish mission Santo Domingo de Talaje. At this time, Franciscan friars interacted with the Guale in an effort to convert them to Christianity, teach them agricultural skills and foodways, and become their allies. Spain held title to this area for nearly two centuries. The Guale, plagued by European disease, escaped to Sapelo Island and elsewhere, in the 1660s.

In 1721, twelve years before the founding of Georgia by James Oglethorpe and the Trustees, Colonel John Barnwell, as directed by the English crown, led a team to construct Fort King George. In defense of the fort, more than 140 soldiers lost their lives and were buried on the adjacent bluff in the **Fort King George Cemetery (GNAHRGIS #46587)**. This early grouping of soldiers' graves makes it the oldest military cemetery in the United States. The fort was abandoned by 1727 after troops were withdrawn to Port Royal; however, South Carolina kept two lookouts at the site until General James Oglethorpe arrived in Savannah in 1733. The fort was not rediscovered until 1932. It was later acquired by the Georgia Historical Commission in 1967 for interpretive use.

⁵ Moore, "Certain Aboriginal Mounds on the Georgia Coast" *Classics in Southeastern Archaeology*, 106-109.

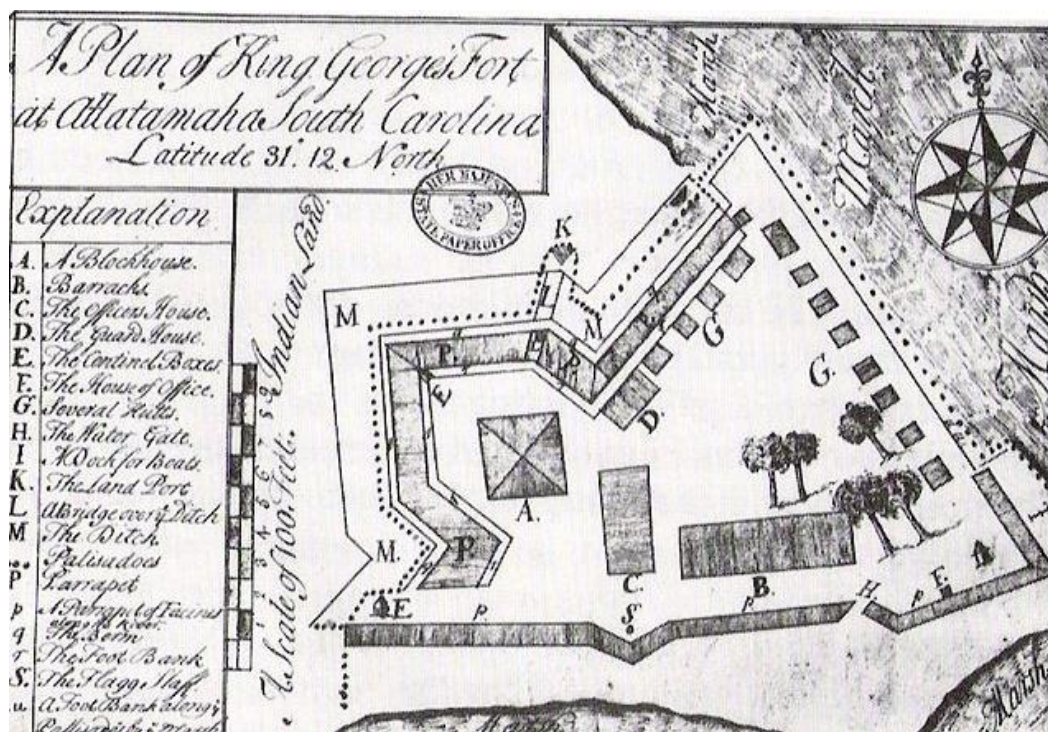

Figure 3: Map of Fort King George likely drawn in 1722 by Colonel John Barnwell, who established the fort near present-day Darien in 1721.⁶

The construction of Fort King George constituted the formal origination of the sawmill industry for which McIntosh County came to be known; when, in the summer of 1721, Carolina sawyers cut the cypress that was used to construct it. Later home to the Hilton & Dodge lumber company and even later the Savannah Lumber Company, a sawmill operated here until the 1920s.

The majority of development within Phase Two can be traced to the late 1740s and early 1750s when several crown land grants were established, on which a handful of farms and plantations were constructed along McIntosh County rivers and creeks. Many early grants were given to members of the McIntosh clan, such as Black Island, which was granted to John McIntosh Mohr. These early plantations were associated with the indigo, rice, and naval stores industries. Very few resources remain from this era, however, as many plantations were repurposed and subdivided over time.

Other early plantations within the survey area were the Hopkins family plantation and those on Creighton Island. While no buildings remain from these operations, the **Slave Dwelling Tabby Ruins (GNAHRGIS #255953)** and **Creighton Island Plantation house site (GNAHRGIS #255954)** on Creighton Island mark where it is believed this plantation and its associated slave dwellings stood.

In the early nineteenth century, Darien became home to one of the earliest steam powered mills at Butler Island and by 1820 Darien had become a timber and lumber center. Butler's steam powered rice mill replaced an earlier tidal powered mill on the same site, the remnants of which remain on the Butler Island site as the **Butler Plantation Rice Mill (GNAHRGIS #46591)**.

⁶ Georgia Archives, "Map of Fort King George" New Georgia Encyclopedia. Web.

McIntosh County experienced significant railroad growth in the 1890s with connections made to Darien in 1899 followed by Meridian, Hudson, and The Ridge. This led to increased development as a result of easier transport of populations and building materials.

Beginning in the 1790s, Major Pierce Butler began planting rice on what is known today as Butler Island. From 1819 to 1861, 600 to 900 acres of land were cultivated on the island, in one of the most labor intensive land transformations in McIntosh County's history. This included a system of dikes and canals constructed by engineers from Holland, as well as the construction of several slave settlements. Rice cultivation was heavily labor intensive, fueled by the work of slaves who lived in these nearby settlements. The fall of 1859 saw the island's most productive crop yield, with over 2.6 million pounds of rice cultivated by over 505 slaves. It was not until the 1890s that rice production began to decline after multiple hurricanes hit McIntosh County. Many McIntosh families can trace their roots to Butler, as many have ancestors who were slaves on the island.

While evidence remains on the landscape of the irrigation system on Butler Island, the remains of the slave settlements exist only in archaeological discoveries, as referenced in the recordation of coordinates where it is believed the **Butler Plantation Slave Village (GNAHRGIS #46593)** stood. The brick steam and tidal mill remnants visible off of Highway 17, which were a part of the **Butler Plantation Rice Mill (GNAHRGIS #46591)**, are the only remaining landscape elements that date to the Butler Plantation era.

It was not uncommon for freed slaves to become residents of nearby areas post emancipation, often purchasing land from the descendants of former plantation owners. Traditions from this early slave period were maintained and passed down to subsequent generations in many cases. One such tradition was that of music and song, including the ring-shout. Popularized again in the twentieth century by the nationally-known McIntosh County Shouters, the ring-shout is a song and dance tradition practiced during slavery with origins in West Africa. Along the Georgia coast, distinctly African and Afro-Caribbean cultural forms survived longer than they did inland. Those with West African roots from this period often identify as Gullah/Geechee, with many ring-shouts sung in the Gullah language. The home community of the McIntosh County Shouters is Bolden, located between Eulonia and Crescent, in the middle of McIntosh County. Also known as Briar Patch, the area is home to the ca. 1930 **Bolden Home Lodge (GNAHRGIS #46575)**, a praise house associated with the shouters.⁷

Other early communities dispersed throughout the county developed in the early twentieth century. The Ridge, or Ridgeville, formed as an escape for timber brokers and bar pilots who wished to get away from the summer heat of Darien in a second home outside of town. Numerous frame dwellings with Victorian details make up a large portion of the district, the majority of which were secondary residences for upper level management in the lumber, shipping, and related industries and their families.

Many early McIntosh communities were fueled by agricultural and marine pursuits. One of the earliest of these communities in the Phase Two area is Carneghan (spelled Carnigan today), established by freedmen after the Civil War. The area was home to a turpentine still and named for William Carnochan, who operated a still nearby in the early 1800s.⁸ In Valona, the Valona Shrimping Company was established in 1906, and is still in operation today.⁹ By 1905, several post offices had been established across the county

⁷The McIntosh County Shouters: Spirituals and Shout Songs from the Georgia Coast, National Museum of African American History and Culture, Smithsonian, booklet.

⁸ Sullivan, *Early Days on the Georgia Tidewater*, A New Revised Edition, 136

⁹ "Valona Shrimp Company" Web.

to include Crescent and Meridian in 1896, Valona in 1898, and Ardick in 1905. Ridgeville and Eulonia would not be recognized with post offices until 1929 and 1930, respectively.¹⁰

Another early community established by freed African-Americans was Hudson, located north of Carnigan, largely along a short stretch of Cow Horn Road and Meridian Landing Road (Sapelo Dock Road) leading to Hudson Creek. Families in Hudson were some of the first in the county to begin commercial shrimping as a means of making a living.¹¹ Other lesser known communities that existed but have largely been absolved based on their proximity to nearby locales include Inwood and Cedar Point. Associated with the Atwood family and the **William H. Atwood House (GNAHRGIS #46557)**, the Atwood family has origins in the area that date to before the Civil War. Ann McIntosh of Cedar Point married Henry Skilton Atwood of New England in 1824. Their sons farmed and were later associated with the timber business. George E. Atwood, a timber dealer, ship chandler, and land owner, is typically credited with the naming of “Valona,” for a vessel from the Albanian port of Valona loading timber in Sapelo Sound. Together, James and Jules Atwood, brothers of George, started a business at Cedar Point canning oysters and shrimp. William Henry Atwood started an oyster cannery at Cedar Point, later operated by his son. By the 1930s, commercial shrimping had become a way of life for many Atwood descendants. William H. Atwood built the Queen Anne house that stands today at Cedar Point, on the site of his father’s former plantation overlooking Cedar Creek.¹²

In 1911, Darien received its first regular telephone service and by 1961, the **Darien Telephone Company (GNAHRGIS #253459)** had built its current building on Highway 17, operating over 734 stations.¹³ Between 1913 and 1914 the Georgia Coast and Piedmont Railroad was laid across Butler Island. Bankrupt by 1919, the tracks were converted to roads, becoming Highway 17. The road, however, was not macadamized until 1926. The island changed hands several times in the early twentieth century after being untenanted in the 1880s and 90s. By the 1920s, the island was transitioning, ushering in its second period of most intensive use.

In 1927, Tillinghast L. Huston acquired Butler Island by sheriff’s sale. A former military colonel, Huston utilized the land for his trucking business and dairy production, constructing his home, the 1927 Colonial Revival house known today as the **Colonel Huston House (GNAHRGIS #46592)** and later the ca. 1935 **Huston Dairy Barn (GNAHRGIS #46595)**. Huston updated and modernized the dikes and canals on the island’s former rice fields, processing and shipping milk to the eastern U.S. in addition to transporting lettuce, celery, and flowers by truck. Area production peaked between 1945 and the early 1950s, during which time tobacco magnate R.J. Reynolds of Sapelo Island acquired the island. It later changed hands a final time, becoming a waterfowl management area operated by the Georgia Game and Fish Commission in 1954. Since, the site has been home to the Nature Conservancy and served as offices for the Department of Natural Resources (DNR). While still owned by the DNR, the house is now vacant with no plans for immediate reuse.

Other twentieth century industries that flourished included the cultivation, drying, and shipping of deer tongue, a native wild plant whose leaves are used in flavoring cigarette tobacco. With an annual crop of one million pounds, deer tongue was farmed in McIntosh County most heavily in the 1930s, as recorded in *Georgia Magazine*. Relatively unlucrative, the crop unfortunately requires a significant amount of

¹⁰ Sullivan, *Early Days on the Georgia Tidewater*, A New Revised Edition, 787.

¹¹ *Ibid*, 587.

¹² *Ibid*, 759-760.

¹³ *Ibid*, 821.

labor and employed many.¹⁴ A handful of deer tongue barns remain on the landscape today, including the **Deer Tongue Barns (GNAHRGIS #255903)** at Rossville Road and Highway 99 which were originally associated with the crop according to local tradition.

In 1941, the *McIntosh County News* was established, providing regular distribution of news and events to county residents. One event worthy of publication was the widening of Highway 17 in 1948, which led to a greater ease of transport and increased development along this north-south corridor. Likewise, the road leading to Fort King George Road was paved in 1952 in an effort to attract visitors to the county's famed historic site.

In the 1950s, the timber and cotton industries, once prevalent, were replaced by a rise in the fishing and shrimping industries. Wartime brought jobs to McIntosh County. The end of the war meant the construction of the bulk of McIntosh County's residential building stock and much of the county's roadside architecture, to include service stations, motels, and cabin courts. As part of this, the area's vacation industry was sparked, with the development of several fishing and hunting camps, traditions although once more prevalent, still exist today.

In addition to these "rustic retreats," several motor courts were built as Highway 17 became the main thoroughfare for visitors coming south through the county on their way to Florida. Many of these buildings remain, to include the **Pine Wood Camp (GNAHRGIS #46546)** and **Delta Cabin Court (GNAHRGIS #46548)**. Visitors consistently frequented these sites up until the 1970s with patronage dropping off after the construction of Interstate 95 in 1957. Supplanting Highway 17 as the preferred path of travel north and south, the interstate played a major role in connecting McIntosh County to the rest of the east coast.

Roadside development continued into the 1950s with the continued rise of the automobile and interest in nearby amenities and attractions. Some of these later roadside sites include the **Fort King George Motel (GNAHRGIS #47148)** and **Pinewood Camp Annex (GNAHRGIS #46547)**. Since, relatively no new hotel or motel construction has occurred in the county. Additional information about the significance of Highway 17 can be found in Appendix 3.

In 1964, McIntosh County was hit by Hurricane Dora. Low lying areas, including the site of the **Huston Dairy Barn (GNAHRGIS #46595)**, experienced significant flooding. Despite the storm, the county's numerous docks and boats along its coast, experienced significant use by shrimp boats and other vessels during this decade.

Much of the area's installed manufactured housing was constructed in the 1960s and 70s, to include the homes popularized by Jim Walters that are common throughout the county. This period saw much of the county's suburban growth, with numerous houses and mobile homes built in the areas connecting many of the county's unincorporated and dispersed communities.

With the creation of the Sapelo Island National Estuarine Research Reserve in 1976, a state-federal partnership was begun between the Georgia Department of Natural Resources and the National Oceanic and Atmospheric Administration.¹⁵ The establishment of this partnership meant that a plan was set in motion to construct an inland visitor center alongside the ferry dock providing transportation to the island. As a result, the Sapelo Island Visitor Center was built in recent years, facilitating tourism and interest in the island and its history.

¹⁴ Ibid, 802.

¹⁵ "Sapelo Island Natural Estuarine Research Reserve" Web.

Many of the early enclave communities in the county have become less discernable over the years as development has occurred outward, away from these locales, largely on the periphery of these areas. Most of the county's oldest dwellings are concentrated in the central core of these locales. The suburban development of Tolomato Island being the most obvious and recent example. Located on a particularly viable site, the development fronts the marshes and coast, just north of Darien. Named for the Guale Indian town and mission, Tolomato is believed to have been originally located on the upper end of Harris Neck, across the marshes and tidal creeks from Santa Catalina.¹⁶ The development's association with the name stems from early incorrect scholarship that the tabby ruins associated with **The Thicket (GNAHRGIS #46528)**, preserved amongst the suburban houses that are part of the area today, were part of an early Spanish mission. It was not until the 1930s, under the scholarship of Merton Coulter and Marmaduke Floyd, that this theory was debunked, largely based on the discovery of a letter written by Kate McKinley, who describes recollections of her uncle, the grandson of Thomas Spalding, linking the tabby ruins to the slaves and mill associated with Spalding's plantation.¹⁷

Other areas that have developed in recent decades include Black and Hird Islands, which have vehicular access from mainland McIntosh County and were largely subdivided beginning in the 1970s.

Due to the heavy abundance of marsh, the abundance of flora and fauna, and their importance as protective barriers adjacent to mainland McIntosh County, several of the county's islands have been afforded protection through state designations such as Butler, Rockdedundy, Rhett's, and Champney Islands, which are part of the Altamaha Wildlife Management Area that was established in the mid-1950s, and Wolf, Egg, Little Egg, Broughton, Little Broughton, Wrights, Lewis, Werriats, Weed, and Rabbit Islands, which are part of a state wildlife refuge begun in 1930. Other areas are protected through conservation easement and/or are currently under the care of preservation minded stewards, such as Creighton Island. These sites constitute the most vulnerable areas, containing sensitive habitats that warrant greater protection.

Development in the Phase Two area continued steadily in recent decades, with many area homes built throughout the county over the course of the 1980s and 90s. Many historic resources received upgrades during this period, the majority of which included rear additions, the installation of vinyl siding and windows, and the replacement of historic outbuildings with prefabricated ones. Far fewer commercial buildings were built at this time, however, consistent with a somewhat stagnant economic growth throughout the county from the 1980s to today. The sectors that have seen success in recent years include the crabbing and heritage tourism industries, as well as the continuation of timber cutting.

SECTION 4: SURVEY METHODOLOGY & RESULTS

Methodology

All survey work completed as part of the McIntosh County Historic Resources Survey can be broken down into three cross-pollinating parts: archival research, field survey, and the recording of information. All work was guided by the *Georgia Historic Resources Survey Manual* provided by the Historic Preservation Division as well as the *National Register Bulletin 24: Guidelines for Local Survey: A Basis for Preservation Planning*.

On October 20, 2016 a public presentation was made at the Fort King George Auditorium as part of a Lower Altamaha Historical Society's (LAHS) meeting, where a summary of findings from Phase One and anticipated goals for Phase Two were shared. The meeting was publicized in *The Darien News* and shared with membership of LAHS.

At the start of the survey, an introductory reconnaissance survey was performed to determine locations and concentrations of historic resources as well as geographic and man-made boundaries, determining Phase Two extents. As a result, Interstate 95, Highway 99, and the Atlantic Ocean were identified as logical bounds, with the exclusion of Sapelo, Union, and Doboy Islands, which are proposed to be surveyed as part of phase three due to a wealth of historic resources located in these areas. Following, an intensive field survey was performed in which resources constructed before 1975 were photographed and recorded using the Georgia Historic Resources Survey Form. Survey work was comprehensive, regardless of style or significance, with the exception of repeated house types located in densely developed subdivisions, such as Darien Heights, where representative building types indicative of the neighborhood were selected and surveyed. After data was collected in the field, it was then transferred to the Georgia Natural, Archaeological, and Historic Resources Geographic Information System's (GNAHRGIS) online database. All survey data can be viewed online at www.gnahrgis.org.

The Phase Two eastern survey boundary proved the most challenging as this area predominantly contains long lots fronting area marshes accessed from Highway 99. These lots are often accessed only by private, gated drives that terminate near the coast and often feature "no trespassing" signs along Highway 99. Whenever possible, the date of construction of structures was researched using the McIntosh County Board of Tax Assessors records. Parcels containing resources 40 years of age or older were targeted for survey. Additionally, any parcels containing resources previously surveyed in 1989 were targeted. As a result, several property owners were contacted by mail to request access. Of the owners contacted all but two responded, allowing access.

When properties were anticipated to be difficult to locate via aerial map, such as those covered in vegetative growth or sites absent of buildings, such as cemeteries, longitude and latitude coordinates were gathered in the field and input into GNAHRGIS as a way to identify specific site locations.

Other parameters that were used to guide survey work included the exclusion of mobile homes from survey, allowing for a greater area to be surveyed as part of Phase Two. Additionally, all historical markers, regardless of age, were surveyed in attempt to comprehensively record all of the markers in the county.

Background research was limited to information pertaining to the Phase Two survey bounds, placed within the larger context of local, state, and national trends. Repositories consulted include the Ida Hilton Public Library, the Lower Altamaha Historical Society archives, and the Georgia Room at the Live Oak Branch of the Savannah-Chatham County Public Library. Additionally, the 1989 Historic Resources

Survey completed by Chapman & Associates was cross-referenced when applicable, including the update of all previously entered GNAHRGIS entries linked to this survey located within the Phase Two bounds.

The majority of research pertaining to the social history of the historic communities within the Phase Two bounds, as well as new information collected regarding individual sites, proved to be the most informative. Gathered through interviews with the Principal Investigator and intern Erin Ward, several property owners took the time to share their knowledge of their properties and related histories. When possible, information was verified with primary and secondary textual sources.

Lominack Kolman Smith performed an intensive field survey over several staggered days from October 2016 to March 2017, punctuated by time spent in the office inputting data gathered in the field into GNAHRGIS. The McIntosh County Board of Tax Assessors was consulted as part of this process for the determination of property lines, building sketches, year built data, and property identification numbers (PIN). Lastly, survey data from 1989 was cross referenced whenever possible to identify changes that occurred since this time and character defining features that may have been altered, and to verify and update any historical information previously recorded. Unless visibility was limited, a minimum of two high-quality digital photographs were made of each resource surveyed. Additionally, all outbuildings were surveyed when visible from the right of way and associated with a primary resource over 40 years of age.

Seventeen resources that were omitted during Phase One and discovered after the fact were surveyed as part of Phase Two in an effort to resurvey all resources surveyed in 1989.

While not intended, it is possible that a historic resource may have been inadvertently omitted from this survey, as a result of changes to its architectural or physical character, or related to its borderline age. The majority of historic resources within the Phase Two bounds have been documented.

Survey Results

A total number of 496 resources were surveyed as part of Phase Two. The breakdown of resources by type includes 470 buildings, 1 structure, 9 objects, and 16 sites (Table 1). All resources over 40-years of age, regardless of integrity or condition, were surveyed as part of this phase, excluding mobile homes. Additionally, two owners of eligible survey properties did not respond to requests for access to view resources believed to be located on their property. The survey area includes several dispersed communities, including Ridgeville, Meridian, Carnigan, Valona, portions of Crescent, Bolden, and Ardick, as well as nearby resources in areas that are less defined.

A total of 288 resources were assigned a new and unique Georgia Natural, Archaeological, and Historic Resources Geographic Information System (GNAHRGIS) number. Additionally, a total of 208 resources that were previously surveyed as part of the 1989 historic resources survey were updated in GNAHRGIS. Only the GNAHRGIS fields that represented features of these resources that were altered or changed since 1989 were updated. Resources less than 40-years old were not entered into GNAHRGIS, with the exception of two historical markers that were installed in recent years in an effort to comprehensively survey all historical markers within the survey area in addition to the 1988 reconstruction of the **Fort King George blockhouse, replica (GNAHRGIS #46589)**, which was also entered. Resources that had been demolished since the 1989 survey received updates to their basic resource information in GNAHRGIS only.

A survey index listing each resource's GNAHRGIS number, resource type, name, address, parcel number, current use, date of construction, building type, and architectural style, as applicable, can be found in the

appendices. These resources can be broken down by the historic resource types identified by the National Park Service (Table 1).

Table 1: Number of Resources Surveyed by Type

Resource Type	Number of Resources
Building	470
Structure	1
Object	9
Site	16

Resources that were located in the Phase Two boundaries but were surveyed in Phase One as outlier resources were not included in the above tallies.

Construction Dates

By tallying resource construction dates by decade, it is possible to see periods of heightened development as well as which historical periods are best represented on the landscape today. There are few antebellum resources that remain since the majority of the county's plantation era buildings have been lost and the majority of communities recognized throughout the county today date to the late nineteenth and early twentieth century. The period of greatest prosperity and growth within the survey area occurred between 1930 and 1969, spanning the Great Depression, World War II, and the Cold War. While population growth fluctuated between these years in McIntosh County, the number of buildings that remain on the landscape today represents the solidity of the building stock from this period and the rise and popularity of manufactured housing, which was introduced after World War II. A total of 285 resources, or 57% of resources surveyed, date from this period.

The 103 resources surveyed in the 1989 survey that have since been demolished were not included in the counts in Table 2.

Table 2: Number of Resources by Construction Date by Decade

Decade	Number of Resources
3000-3010 BC	1
1730-1740	1
1790-1799	2
1800-1809	1
1820-1829	1
1830-1839	6

2000-2009	1
2010-2017	1

Original and Current Use

The overwhelming majority of resources surveyed qualify as single-family residences. A total of 384 resources, or 77% of the resources surveyed, could be attributed to this category.

The survey area included a high number of churches and cemeteries, with many congregations and associated families with origins dating to the mid to late nineteenth century. The rest of the resource types represented show a variety of other uses, to include six buildings associated with agriculture/subsistence, a building type that was formerly more common in this largely rural area.

Resources surveyed in the 1989 survey that have since been demolished were not included in the counts in Tables 3 and 4.

Table 3: Breakdown of Resources by Original Use

Original Use	Number of Resources
Agriculture/subsistence	6
Military Facility	2
Business/Office	3
Commerce & Trade	2
Department store/general store	1
Specialty Store	1
Single Dwelling	382
Education – School	1
Funerary – Burial	11
Automobile/ Truck Services	2
Auditorium	1
Religious Facility	12
Religious Related Housing	1
Social and Civic – Meeting Hall	2
Transient Housing	6
Transportation	1

Table 4: Breakdown of Resources by Current Use

Current Use	Number of Resources
Art gallery/ exhibition hall, zoo	2
Automobile/ Truck Services	2
Social and Civic	1
Specialty Store	3
Business/Office	5
Transient Housing (Hotel/Motel/Boardinghouse)	4
Single Dwelling	287
Work in Progress	1
Funerary – Burial	10
Government	1
Agriculture/subsistence	1
Secondary Structure, domestic-related outbuilding	1
Museum/Exhibition	2
Religious Facility	10
Religious Related Housing	1
Multiple Dwelling	1
Vacant/not in use	51

The majority of single dwellings that have a different primary use today are vacant or not in use. As compared to areas within Darien, there has been less of a campaign to remove blight, allowing these resources to remain on the landscape.

SECTION 5: ARCHITECTURAL ANALYSIS

Architectural Styles

The architecture of the area surveyed spans a variety of construction periods and styles, representative of national and local trends, available materials, demographics, location, and use (Table 5). Much of the county's buildings exhibit vernacular expressions of academic styles representative of the area's rural surroundings and local demographics. A small number of buildings in the Phase Two area can be assigned a specific academic style and are highlighted in this report.

Resources surveyed in the 1989 survey that have since been demolished were not included in the counts in Table 5.

Table 5: Breakdown of Resources by Architectural Style

Architectural Style	Number of Resources
Colonial Revival	3
Federal	2
Prairie style	1
Folk Victorian	7
Queen Anne	1
Gothic Revival	1
Greek Revival	1
Italianate	3
Craftsman	1
Plain-style (Residential)	86
Modern Movement	6
No academic style	258

As indicated above, Plain-style buildings, all of which are ranches, dominate the landscape; a property type with widespread popularity that is still fashionable today. Plain-style houses experienced significant popularity in McIntosh County where large lots and a desire for single-floor living was pervasive, largely from the 1960s on.

General Outline of Styles

The outline to follow provides a general overview of the various academic architectural styles that can be found within the survey area. An architectural and historical context is provided that describes the development of these styles based on trends evidenced at the local, regional, and national level.

COLONIAL REVIVAL (1880-1955)

The Colonial Revival style was the dominant style of choice for residential buildings throughout the first half of the twentieth century. This constituted a rebirth of interest in the early English and Dutch houses of the Atlantic coastline, while elements of the earlier Georgian and Adam styles form the backbone of this Revival.

The Colonial Revival is characterized by an accentuated front door, typically with a decorative crown or pediment, supported by pilasters, or extended forward and supported by slender columns to form an entry porch. Doors commonly have overhead fanlights or sidelights, the façade is normally symmetrically balanced, and the windows are double-hung sash with multi-pane glazing in one or both sashes.¹⁸

Photo 1: Colonel Huston House, west side Highway 17, approx. 1 mile south of bridge to Darien, built ca. 1927 (GNAHRGIS #46592)

The **Colonel Huston House** is a good example of the Colonial Revival style. With a symmetrical façade, an accentuated front door with side- and fanlights, and an entry porch supported by slender columns, the house has many features indicative of the style. Popular across a variety of social classes and demographic groups, the house is one of the county's most recognized dwellings. Sized and placed for visibility, the Colonial Revival style provides a fitting framework for the house's prominence.

¹⁸ McAlester & McAlester, 320-341.

FOLK VICTORIAN (1870-1910)

The Folk Victorian style is an adaptation of Victorian styles as seen in simpler houses that were of greater prevalence and often located in rural areas. The porch and the cornice are the most common areas where Victorian detailing can be found. These details often include Queen Anne inspired spindlework, turned posts, and lace-like brackets. Likewise, Italianate style brackets are commonly found at the cornice line. In keeping with their simplicity, these houses typically have symmetrical facades and lack textured or varied wall surfaces as seen in the Queen Anne style.¹⁹

The growth of McIntosh County's lumber industry, in addition to the introduction of rail transportation in the late nineteenth century, played a key role in the development of the Folk Victorian style in the county. The inexpensive, pre-cut elements common to the style, could readily be delivered and applied to new and existing houses.

Photo 2: Dunwoody-Tyson House, 14273 Highway 99, Ridgeville, built ca. 1890 (GNAHRGIS #46501)

¹⁹ McAlester & McAlester, 308-317.

Photo 3: Thompson-Dean House, 1014 Scott Road, Ridgeville, built ca. 1870 (GNAHRGIS #46515)

The **Dunwoody-Tyson House** and the **Thompson-Dean House** both are good examples of the Folk Victorian style, the style most well represented in Ridgeville. These two dwellings are situated in close proximity to Highway 99, to allow for their appreciation. Important details include cross gable roof configurations, clapboard exteriors, lace-like brackets and spindlework, and prominent porches.

QUEEN ANNE (1880-1910)

The Queen Anne style was popularized by English architects led by Richard Bernard Shaw, spreading in America through pattern books and publications such as *The American Architect and Building News*. Like other styles of the same period, the development of the railroad made this style accessible to the masses as pre-cut architectural details could be transported and shared nationwide.

The Queen Anne style is characterized by steeply pitched roofs or irregular shapes, typically with a dominant front facing gable; patterned shingles; chamfered window bays; and an asymmetrical façade with a one-story partial or full-width porch.²⁰

Photo 4: William H. Atwood House, southwest corner of Riverside and Cedar Point Road, Valona vicinity, built ca. 1890 (GNAHRGIS #46557).

The **William H. Atwood House** is the only Queen Anne style building in the Phase Two area, however, is worthy of recognition as a good example of the style. Characterized by a complex roof, clapboard exterior, full-width front porch with turned posts, elongated fenestration, multiple corbelled chimneys, and vents and other details, the house has many noteworthy Victorian details.

²⁰ McAlester & McAlester, 262-287.

GOTHIC REVIVAL (1840-1890)

By the 1840s, a new building trend was on the horizon. With roots in Britain, liturgical Christianity, and the aristocracy, the Gothic Revival style was popularized domestically through Andrew Jackson Downing's publication *Cottage Residences*. American architects influenced by Augustus W.N. Pugin and English ecclesiologists promoted the accurate use of the style as the only suitable structure for Christian worship. This style is evidenced in Darien solely in religious architecture.

The Gothic Revival style is characterized by a steeply pitched roof, often with multiple gables, decorated vergeboards, the absence of eaves or trim beneath the gable edge, windows within gable ends, pointed arch windows, and one-story porches.²¹

Photo 5: Baisden Chapel, 5489 Highway 99, Crescent, built ca. 1880 (GNAHRGIS #46560)

The **Baisden Chapel** is the only Gothic Revival example in the Phase Two survey area, however, is worthy of note. This rural chapel has elaborate arched windows and decorative exposed rafter ends. It's simple massing and clapboard exterior could likewise qualify it as a Folk Gothic structure.

²¹ McAlester & McAlester, 196-209.

PLAIN-STYLE (1935-1975)

Originating in California in the mid-1930s, the Plain-style gained wider popularity in the 1940s. By the 1950s and 60s, the style had become the dominant choice for residential architecture in the form of rambling ranch houses on large lots made possible by the popularity of the automobile, as it replaced streetcars and buses as the dominant form of transportation following World War II.

The Plain-style is characterized by asymmetrical designs with low-pitched roofs, a moderate or wide eave overhang, a wood or brick clad exterior, picture windows, and occasional decorative iron or wooden porch supports. Large private outdoor living areas at the rear of houses were added in direct contrast to the large front and side porches of the late nineteenth and early twentieth century styles.²²

Photo 6: Single Dwelling, 800 Congress Street, Darien, built ca. 1962 (GNAHRGIS #253240)

²² McAlester & McAlester, 479.

Photo 7: Single Dwelling, 1325 Lakeshore Drive, Darien, built ca. 1975 (GNAHRGIS #253882)

The **Single Dwellings** recognized above are good examples of Plain-style architecture. Both have asymmetrical facades and low-pitched roofs. The Single Dwelling at 800 Congress Street has a picture window and its original carport, common stylistic elements. The Single Dwelling at 1325 Lakeshore Drive features elongated eaves and an angled support at the entrance, expressing a Japanese influence that is often evident in Plain-style architecture.

MODERN MOVEMENT (1930-)

The Modern Movement in architecture emphasizes form rather than ornament, structure and materials over picturesque constructions, and the rational and efficient use of space. The movement began to evolve in the 1930s and encompassed multiple modern expressions, including the International, Expressionist, Brutalist, New Formalist, and Googie movements. Technical innovation, experimentation, and a reexamination of the way humans lived in and used the designed environment were hallmarks of the Modern Movement.

The Modern Movement, eschews traditional decorative detailing and often features wide overhangs, exposed supporting beams and other structural members, contrasting wall materials and textures, and unusual window shapes and placements.

Photo 8: Single Dwelling, 1506 Wayne Street, Darien, built ca. 1970 (GNAHRGIS #253265)

Photo 9: Single Dwelling, 1113 Ridge Road, Darien, built ca. 1960 (GNAHRGIS #253281)

The **Single Dwelling** at 1506 Wayne Street is one of the county's most prominent modernist dwellings, with its large mass, expansive low pitched gabled roofs, angled lot placement, concealed entry, and other details. To contrast, the Single Dwelling at 1113 Ridge Road shows the adoption of the style for vernacular use. A simple concrete block dwelling, the house incorporates a broken gable roof with sharp angles, solidifying its association with the Modern movement.

Building Types

A total of 286 resources surveyed were identified as conforming to one of the building types recognized by the Historic Preservation Division as identified in the Georgia Historic Resources Survey Manual.

Resources surveyed in the 1989 survey that have since been demolished were not included in the counts in Table 6.

Table 6: Breakdown of Resources by Building Type

Building Type	Number of Examples

-----------------------	---

Property Types Defined

Building types prominent within the survey area are defined below with images of specific resources indicative of that type provided for further illustration.

When possible, illustrations of building types and associated floor plans from Georgia Department of Natural Resource's text *Georgia's Living Places* are included to provide greater understanding.

HALL-PARLOR

Hall-parlor houses are named after the two uses for the two unequal rooms that make up these dwellings. The entrance opens into the larger of the two rooms, the hall, which served multiple functions. Typically gabled, hall-parlor houses are heated with one or two flues or exterior-end chimneys. It is one of the earliest house types found in America, however, in Georgia most of the remaining examples were built in the last half of the nineteenth century and the first three decades of the twentieth. The type was adaptable and expandable and were common dwellings for tenant farmers and mill workers.

Photo 10: Arthur Hamilton House, 1263 Ashantilly Road, Darien, built ca. 1885 (GNAHRGIS #46605)

Not confined to a specific area, there are eight identified hall-parlor houses scattered throughout the survey area. Many of them are vacant and overgrown with vegetation. The **Arthur Hamilton House** is a rare example of an intact hall and parlor house in good condition. Those that do remain intact no longer have their exterior end chimneys or flues and have replacement exterior cladding.

GEORGIAN COTTAGE and GEORGIAN HOUSE

Despite its popularity as the single most common and long-lived house type in Georgia, the Georgian cottage is named for its floor plan rather than its location. Rooted in its associations in eighteenth century English Georgian architecture, the Georgian plan consists of a central hallway with two rooms on either side. The plan shape is square or nearly square, the roof is typically hipped but sometimes gabled, and chimneys are placed in the interior and sometimes on exterior walls. Houses of this type were built in all periods of Georgia's history and well into the twentieth century with the greatest concentration seen between 1850 and 1890. Georgian houses have all of the characteristics of a Georgian cottage but are two stories tall, the largest numbers built between 1850 to 1860 and 1900 to 1930.

Photo 11: Hopkins-Williams House, 5709 Highway 99, Crescent vicinity, built ca. 1820 (GNAHRGIS #46558)

Photo 12: Legare-Britt House, 1756 Bond Road, Darien, built ca. 1882 (GNAHRGIS #46497)

There are sixteen houses that are classified as Georgian cottages and four that are classified as Georgian houses within the survey area. The most common alterations include the removal of original chimneys and rear additions.

GABLED WING (GABLED ELL) COTTAGE

Of all of the common late nineteenth century house types in Georgia, the gabled wing cottage was the most prevalent. T- or L-shaped in plan, these houses always have a gabled roof and are sometimes called the gable-front-and-wing or gabled ell houses. The gable front is located at one end of a recessed wing, which is parallel to the façade. The front door is typically located in the recessed wing and often leads into a hallway or directly into the room in the wing. This house type was popular in both rural and urban areas and in both modest and well-to-do neighborhoods with the peak of construction occurring between 1875 and 1915.

Photo 13: Paul House, 13931 Highway 99, Ridgeville, built ca. 1890 (GNAHRGIS #46511)

The **Paul House** is the only dwelling that identifies as a gabled wing (gabled ell) house in the Phase Two survey area, however, it is a good example of this house type.

BUNGALOW

The bungalow house form is long and low with an irregular floor plan and an overall rectangular shape. Integral porches are common, as are low-pitched roofs with wide overhangs. The type was popular in Georgia between 1900 and 1930, with large numbers in rural and urban areas. There are four sub-types based on form and roof orientation: front gable, side gable, hip, and cross gable. The front- and side-gabled versions outnumber the hipped versions, while cross-gable bungalows are rare.

Photo 14: Single Dwelling, 5412 Highway 17, Ardick, built ca. 1947 (GNAHRGIS #253470)

Photo 15: Single Dwelling, 1012 McIver Place, Meridian, built ca. 1930 (GNAHRGIS #253855)

The second most common house form in the survey area, there are 53 dwellings surveyed of this type. The majority are simple, frame, front gable dwellings. The most common alterations are porch enclosure, replacement exterior cladding, and rear additions.

RANCH

The ranch house has a long, narrow, rectangular shape, with or without projections. Bedrooms are clustered at one end, the principal entry and living spaces near the center, and the garage or carport at the other end. The roof is also typically very low-pitched.

Photo 16: Single Dwelling, 14191 Highway 99, Ridgeville, built ca. 1970 (GNAHRGIS #253314)

Photo 17: Single Dwelling, 1145 Oak Street, Darien, built ca. 1966 (GNAHRGIS #255898)

The single most common house type in the survey area, 91 ranch houses were surveyed in Phase Two. The most common form is the linear sub-type with half-courtyard ranches being the second most prevalent. The linear sub-type has a length-to-width ratio of 2 to 1 with an overall long, narrow, linear form. The half courtyard subtype features a half-courtyard formed by the intersection of two wings of the house.²³ Typical alterations include added and/or enclosed carports, rear and side additions, and replacement fenestration.

²³ Guidelines for Evaluation, New South Associates 45-48.

MANUFACTURED HOME (INSTALLED)

The story of manufactured housing has its roots in the demand for economical housing that is quick and easy to construct. While the greatest association with manufactured housing is the use of mobile homes, the installation of houses manufactured off-site, to be assembled on-site by the homeowner or with local labor, similar to a “kit house,” received much popularity in the decades following World War II. After the war, veterans came home to find affordable housing in short supply. Jim Walters, whose name became synonymous with this form of shell home construction, was one of the leaders in the installed manufactured house movement and is linked to the construction of numerous houses from the 1940s, 50s, and 60s in Darien. These manufactured homes were often purchased and then installed and/or finished by the purchaser. Simple frame houses, these dwellings are often 2,000 square feet or less, with double-hung or jalousie aluminum windows accompanying a picture window, a recessed porch, and low roofs covered in asphalt shingles with moderate overhangs.

Photo 18: Single Dwelling, 1038 Skunk Lane, Bolden, built ca. 1970 (GNAHRGIS #256052)

Photo 19: Single Dwelling, 1132 Ridge Road, Darien, built ca. 1962 (GNAHRGIS #253283)

An extremely popular property type, there are 42 dwellings that can be classified as Manufactured Homes (Installed) in the Phase Two survey area. Easily attainable and readily available, these buildings gained wide popularity in McIntosh County.

PYRAMID COTTAGE

Consisting of a square main mass, the Pyramid Cottage housing type is one of the simplest housing forms in early twentieth century Georgia. With four principal rooms and no hallway, the plan is very utilitarian. The most memorable feature is its steeply-pitched pyramidal roof. Largely built between 1910 and 1930, this house type was most popular in the regions between the Fall Line and the Coast as well as in rural areas and on the fringes of towns and urban areas.

Photo 20: Single Dwelling, 10736 Highway 99, Carnigan, built ca. 1910 (GNAHRGIS #46620).

Photo 21: Single Dwelling, 9422 Highway 99, Carnigan, built ca. 1928 (GNAHRGIS #46616)

While once a more prominent property type, there are nine pyramid cottages in the Phase Two survey area that remain. These early dwellings are significantly deteriorated and threatened by neglect and collapse from the weight of vegetative growth.

OTHER NOTABLE BUILDINGS

Photo 22: Bolden Home Lodge, 1038 Rev. Palmer Road, Bolden, built ca. 1930 (GNAHRGIS #46575)

The **Bolden Home Lodge** is a unique structure. Built as a praise house for the African-American community of Bolden, the building's significance is rooted in its ties to the ring-shout. The home of the famed McIntosh County Shouters, this simple building's wood floor provides the necessary platform for the creation of the rhythmic ring-shout. Facing Highway 99, the building greets those entering Bolden, serving as a local gathering place and point of community pride.

Notable Outbuildings

Numerous outbuildings were recorded as part of Phase Two of the McIntosh County Historic Resources Survey. Every outbuilding associated with a resource over 40-years of age was surveyed and recorded within that resource's GNAHRGIS survey entry. Relatively few historic outbuildings are present on the landscape, however, there are a handful of notable outbuildings that should be highlighted. Historic outbuildings that remain are typically coops, storage sheds, and barns. Below are two rare examples, an exterior kitchen and servants' cottage, both associated with the **Clark-Reames House (GNAHRGIS #46506)**.

Photo 23: ca. 1880 Kitchen, an outbuilding to the Clark-Reames House at 14009 Highway 99, Ridgeville (GNAHRGIS #46506)

Photo 24: ca. 1890 Servant's Cottage, an outbuilding to the Clark-Reames House at 14009 Highway 99, Ridgeville (GNAHRGIS #46506)

While historic outbuildings were once more common on the landscape, many of the agricultural uses tied to these buildings are no longer practiced. Those with agricultural ties that do remain are often deteriorating or neglected. Outbuildings remain a common type of structure throughout the county; however, these utilitarian buildings have typically been replaced with their modern equivalents, the majority of which are pre-fabricated metal or wood frame structures.

Structural Characteristics and Building Materials

An analysis of building material use as part of the survey shows material availability and building and construction trends in the county and the region over time.

The vast majority of buildings within the survey area are frame structures clad in clapboard or weatherboard. The second most common material is brick. Buildings that are clad in aluminum, asbestos, faux tabby, permastone, or vinyl siding have largely been re-skinned, either over top of or in replacement of their original exterior material. Far fewer buildings in the county have been reskinned, as compared to those surveyed in Phase One (less than 1% of the buildings surveyed are clad in replacement materials).

Interestingly, a large number of buildings have received new standing seam metal roofs, the vast majority of which were sheathed with other roofing material originally. This is a recent trend that developed in the 1990s and has taken off considerably.

Resources surveyed in the 1989 survey that have since been demolished were not included in the counts in Table 7.

Table 7: Breakdown of Resources by Exterior Materials

Exterior Materials	Number of Examples
Aluminum siding	24
Asbestos siding	7
Brick	70
Concrete Block	47
Faux Tabby	10
Novelty/Drop Siding	39
Plywood	9
Stucco	6
Tabby	2
Permastone	1
Vinyl Siding	1
Board and Batten	5
Wood Shingles	2
Vertical Board	56
Weatherboard/Clapboard/Beveled Siding	102

Condition

The majority of the resources surveyed are in good condition. Good condition can be defined as an appearance of good structural stability and no visible signs of rot or significant deterioration. Resources that have suffered significant deterioration typically date to earlier periods of development represented on the landscape. Building types that display the most deterioration include pyramid cottages, hall and parlor houses, and Georgian houses and cottages. This constitutes a visible lack of structural stability, collapsed framing, significant vegetative growth, and visible rot. No one area had the highest concentration of deterioration, although it should be noted that the resources in Darien and Ridgeville retain the greatest number of resources with high integrity.

SECTION 6: RECOMMENDATIONS FOR PRESERVATION

The Phase Two survey area, while much more rural than the area associated with Phase One, faces many similar pressures and challenges. The greatest of these is tied to the county's growing number of retirees and visitors, who wish to take advantage of the county's underdeveloped coastline. Originally associated with land grants and agricultural plantations, many of the county's parcels along its coast are particularly susceptible to development. The greatest of these threats are those who have their sights on available swaths of land for the construction of multiple homes or resorts. What this often means is that county historic resources are jeopardized to varying degrees, as evidenced in the loss of the **D'Antignac House (GNAHRGIS #46561)**, where development was intended but never materialized.

Currently the historic resources in the Phase Two area are afforded no formal protection. While a portion of The Ridge neighborhood along Highway 99 is listed as a National Register historic district, this designation provides only recognition, documentation, and qualification for historic tax credits. Thus, it is recommended that a local historic district be established to afford the area protection for the future. The area's high concentration of contiguous historic resources with high integrity that are in good condition make it a good candidate for local district designation. These combined attributes are rare amongst historic resources in the county. This, paired with significant losses of contributing buildings in the district, makes the establishment of a local district a worthy effort.

It should be noted that there is not a widespread understanding that the state of Georgia offers historic tax credits and a property tax freeze for improvements to properties listed on the National Register. It is recommended that the County Preservation Commission assist in an education campaign to this end. This information could be provided through web and print materials as well as facilitated through public meeting. Further, this could be paired with information regarding the establishment of a local district.

Another area worthy of recognition is the section of Highway 17 from Darien to the intersection of Highway 99. Detailed further in Appendix 3, the historic resources associated with the popularity of the Dixie Highway, as it came to be known, were largely constructed after WWI. In recent years, these resources have gained significance with the acknowledged importance of this corridor and the aging of midcentury and roadside architecture over 50 years of age. A study commissioned by the Georgia Department of Transportation related to its significance has established a strong framework for understanding the development of the corridor and its associated resources, as well as recognized specific areas throughout the state that are worthy of preservation, including an area with bounds in McIntosh County. One property type that is represented throughout the Phase Two Highway 17 corridor is the roadside motel, which is further highlighted in Appendix 3. It is recommended that National Register eligibility for buildings associated with this era be explored to include a potential historic district or Multiple Property Listing, an option for listing associated resources that are not contiguous. The timeliness of these considerations is furthered by the recent fire suffered at the **Fort King George Motel (GNAHRGIS #47148)**. The area likewise has the potential for increased modern development, which could include the loss or alteration of significant historic resources, as the significance of these resources is not widely known and no protections are currently afforded to resources associated with the Dixie Highway.

Other resources that are currently threatened include several rural cemeteries and tabby ruin sites. While many of the larger, formal cemeteries in the county are maintained and clearly marked, there are several cemeteries that are hidden in overgrowth and vegetation, located on private property, or are unmarked entirely. Utilizing the *Cemeteries of McIntosh County Georgia*, an attempt was made to locate all cemeteries referenced in the Phase Two survey area. Cuthbert Cemetery and Woodville Cemetery, for

example, were both unable to be located; whereas, Kell's Grove Cemetery appears to be located on private property and was not able to be accessed. All three are recorded in *Cemeteries of McIntosh County Georgia* but were not surveyed in the previous 1989 survey. Often, the cemeteries that are unmarked or hidden were associated with African-Americans or are early small, family cemeteries. Conversations with property owners during fieldwork showed that there is some misinformation about unmarked cemeteries and their histories. It is recommended that a more in-depth survey of cemeteries in McIntosh County be performed, to build on the work compiled in *Cemeteries of McIntosh County Georgia*. When cemeteries are located, longitude and latitude coordinates should be acquired to document their location.

Tabby ruins are subject to a similar fate, as many of these resources are suffering deterioration as well as vegetative overgrowth in several instances. Appendix 3 of the Phase One report expanded on the significance of tabby in McIntosh County. The ruins discovered in Phase Two are similar and date to the same period. Largely located on private property, with the exception of the **Fort King George Tabby Ruins (GNAHRGIS #46586)**, there does not appear to be any active preservation measures in place to preserve the ruins observed. Those that were located are all foundations of former buildings, including those off of McIntosh Road recorded as **Tabby Ruins (GNAHRGIS #253509)**, the **Slave Dwelling Tabby Ruins (GNAHRGIS #255953)** on Creighton Island, and the **Fort King George Tabby Ruins (GNAHRGIS #46586)**. It is recommended that the Preservation Commission facilitate an educational campaign addressing the importance of tabby and options for preservation. Grants could be sought to host an expert, facilitated through public meeting, with instruction on tabby preservation methods. After speaking with the son of the late architect Lee Meyer, who performed significant tabby research, the best preservation methods involve providing cover to ruins in-place to prevent further weathering. While erosion of this natural building material is a slow process, what little remains of tabby ruins throughout the county is fated to deteriorate unless preservation measures are undertaken.

With local government poised to merge many city and county functions in Darien and McIntosh County, it is recommended that the McIntosh County Preservation Commission oversee historic preservation in Darien in addition to the county. This would include oversight of the local historic districts in Darien as well as the continued guidance provided to the Hog Hammock historic district on Sapelo Island, the only local historic district in the county. This would provide consistency and continuity to government led historic preservation efforts as well as capitalize on the limited human resources available within the local preservation community, utilizing those who serve on the County Preservation Commission for oversight of historic preservation in Darien.

This consolidation could be paired with a larger reformation of the Preservation Commission, to ensure that meetings are held regularly, publicized, and recorded in accordance with the historic zoning ordinance. Also, it is recommended that the commission work to fill open seats as they become available, including those seats that are currently vacant. With the addition of new members, the commission could seek training from the Historic Preservation Division (HPD) as an introduction for new members and refresher for those currently seated.

Appendix 3: The Significance of the Dixie Highway

First organized and developed in 1915, the Dixie Highway transformed the way Americans traveled up and down the east coast, connected isolated peoples, opened new markets for the efficient transportation of goods, and created a tourism corridor and economy of businesses and amenities catering specifically to travelers moving north and south along its path. Prior, the majority of Georgia consisted of poor sharecroppers and subsistence tenant farmers whose lives were marked by physical and cultural isolation.

In 1910, only five percent of Georgia's 82,182 miles of roads constructed were recorded as being in "improved condition." While road condition was a key contributor, likely the greatest catalyst for the development of the highway was the availability of an affordable version of the Model T in 1908, which led to a 42 percent increase in automobile registration from 1905 to 1910 (Federal Highway Administration). In Georgia alone, the number of registered automobiles rose from 80 in 1900 to 24,000 by 1915. Other forces that worked to shape the development of the highway were business groups and public officials who saw it as a way to attract hundreds of thousands of wealthy, Northern automobile tourists flocking to the American South through the profits of gas stations, hotels, restaurants, and stores.

First imagined as the "Cotton Belt Route," the highway was initially planned to extend from South Bend, IN to Jacksonville, FL, a course that was later expanded from Chicago to Miami. With the Civil War still present in the minds of everyday Americans, the ambition and optimism surrounding the highway's development led it be referenced as the "Dixie Peaceway." As stated in the New York Times in 1915, the highway had the "...potential to heal the lingering wounds opened fifty years earlier..."

Only one other state would contain more miles of the highway than Georgia. As a result, Georgia served as an influential and guiding force for the highway's development and direction. The Dixie Highway Administration selected the highway's preferred route locations, identifying heavily trafficked railroad corridors and those passing popular historic sites and natural attractions as roads for highway conversion. In Georgia, administrators aimed to route the highway to pass through the state's "romanticized rural landscape [with] fields and orchards ripe with cotton, peaches, and pecans."

It was not until after WWI that the construction of roadside amenities began in earnest in McIntosh. As such, night driving was largely impossible until the early 1920s, as hotels and camps became available and dependable automobile headlights were adopted. Other roadside amenities constructed included gas stations and repair shops, restaurants and taverns, car dealerships, and later the development of the "automobile strip." Constructed as "architecture for speed reading," these structures often had clear building forms or were shaped as the objects they marketed and were accompanied by eye-catching signs and advertisements.

In McIntosh County, the roadside architecture that remains dates to the advent of WWII, following the decline of the timber trade and the demise of the Georgia Coast & Piedmont Railroad. The early automobile era in Darien brought the conversion of the railroad bridge over the Darien River for automobile use. It wasn't until 1944 that the current bridge replaced the steel railroad trestle. Before automobile bridges were built, ferries were used to transport travelers over area waterways (Figure 4). In 1947, local historian Bessie Lewis' wrote about the highway saying, "Highway 17 runs through McIntosh

County – super bridges, marvels of engineering in concrete – span the Altamaha delta where once the river was jammed with rafts of pine timber for the mills.”¹

Figure 4: Altamaha Delta ferry postcard, date unknown.

Throughout the county, railroad track beds and trestle work were later surfaced with oyster shells for automobile use. Referred to historically as the “shell road,” these areas would later become part of Highway 17 in 1926 and 27 and Highway 99 between 1936 to 28 with macadamization.²

Darien welcomed the conversion of its existing roads as part of Highway 17. This is revealed most clearly in the widening of Walton Street, for use as part of the highway. This street runs through the heart of downtown Darien and features some of its most prominent buildings, including the Old Darien Hotel, the **McIntosh County Courthouse (GNAHRGIS #47077)**, and the former **McIntosh County Jail (GNAHRGIS #47078)**. To accommodate the widening, several structures were moved to include the **Todd-Young-Bluestein House (GNAHRGIS #47045)**, which now faces Fort King George Drive. In its place, a gas station anchors the road’s east flank.

With its rise in popularity, numerous roadside motels and camps along the Dixie Highway were built in McIntosh County, growing in number and size over time. While some of the earliest motorcourts have been lost, such as the 1929 Altamaha Inn, others remain. Those that have been surveyed include the ca 1935 **Pinewood Camp (GNAHRGIS #46546)** and ca 1950 **Pinewood Camp Annex (GNAHRGIS #46547)**, the ca 1945 **Delta Motel (GNAHRGIS #46548)**, the ca 1955 **William Penn Court motel (GNAHRGIS #46547)**, the 1957 **Fort King George Motel (GNAHRGIS #47148)**, and the ca 1960 **Country Inn (GNAHRGIS #256198)**. Other McIntosh resources surveyed along Highway 17 indicative of this era include the 1947 Art Moderne **Ford Dealership (GNAHRGIS #251353)** and the ca 1947 **Dixie Towing and Recovery** repair center (GNAHRGIS #253471).

² Darien and McIntosh County Images of America, 107

In addition to new development spawned by the construction of Highway 17, many existing hotels and inns in Darien capitalized on the increased traffic, investing in building renovations, branding, and signage, as evidenced in the ca 1940 remodel of the **Old Darien Hotel (GNAHRGIS #47079)**, for example. Further, many private homeowners opened their doors to visitors with rooms for rent.

With the rise of the automobile and popularity of the Dixie Highway, the adoption of the interstate highway system was embraced and Interstate 95 was constructed in 1957. This, however, meant a new and improved method for traveling north and south down the east coast, reverting much of Highway 17's use to local traffic. With this shift, downtown Darien and many of the roadside businesses in McIntosh County suffered and over time many of the motels were converted for apartment use.

McIntosh County's motorcourts present possibly the most significant historic resource grouping that remains from this era, due to their high integrity and close proximity to one another. Those that remain sit intentionally close to the highway to catch the eye of passersby and are characterized by picturesque groupings of duplexes, individual, or multiple connected units, with postcards circulated of these places as marketing and souvenirs (Figure 5).

Figure 5: Postcard for the ca 1945 Delta Motel (GNAHRGIS #46548)

As part of a draft context study of the Dixie Highway for the Georgia for the Georgia Department of Transportation (GDOT), New South Associates recognized the importance of the concentration of motorcourts in McIntosh County, outlining a handful of potential Dixie Highway historic districts across the state, to include one in Darien (Figure 6).

Figure 6: Potential Dixie Highway historic district map for Darien by New South Associates.

Currently, there are no protections afforded to McIntosh County’s historic resources along Highway 17. While the West Darien National Register Historic District encompasses portions of the west side of the highway along Walton Street and North Way in Darien, the roadside architecture associated with the development of the Dixie Highway in Darien is largely concentrated north of the city, outside of what is largely considered Darien’s historic core. In recent years, however, more midcentury and roadside or “kitsch” architecture has gained greater significance nationwide as many of these resources have reached 50 years of age and have been recognized as indicative and unique to this era. Through fieldwork, survey, and research a potentially eligible National Register district was identified by New South Associates, to include resources specifically associated with the Dixie Highway based on the county’s unique concentration of period motorcourts that remain on the landscape, as outlined in Table 8.³

Table 8: Noteworthy Resources Associated with the Dixie Highway in Phase Two

Name of Resource	Date of Construction	Address
Pinewood Camp	ca 1935	1026-1089 Morris Circle
Pinewood Camp Annex	ca 1950	5535-5597 Highway 17
Delta Motel	ca 1945	1711 Highway 17
William Penn Court	ca 1955	5917 Highway 17
Fort King George Motel	1957	1205 Highway 17
Country Inn	ca 1960	15099 Highway 17
